1 Description

This device is an implementation of the IEEE type PSS1A power system stabilizer model. This device is implemented as described in [1]. Implementation details can be viewed by inspecting the subcircuit of this device.

1.1 Pins

This device has 2 pins:

| Pin name | Type | Description | Units |
|----------|--------|-----------------------------------------------------------|-------|
| VSI | Input | Synchronous machine speed deviation or acceleration power | pu |
| VST | Output | PSS output (equivalent of terminal voltage) | pu |

1.2 Parameters

The default set of parameters can be found in [1].

1.2.1 Data tab

The parameters on the Data tab are:

1. **Time constant T_5** : transducer time constant
2. **Time constant T_6** : transducer time constant
3. **Gain K_S** : power system stabilizer gain
4. **Filter constant A_1** : PSS signal conditioning frequency filter constant
5. **Filter constant A_2** : PSS signal conditioning frequency filter constant
6. **Lead time constant T_1** : Lead time constant
7. **Lead time constant T_3** : Lead time constant
8. **Lag time constant T_2** : Lag time constant

9. **Lag time constant T_4** : Lag time constant
10. **Maximum output V_{STMAX}** : PSS maximum output signal
11. **Minimum output V_{STMIN}** : PSS minimum output signal

2 Initial conditions

The initial output signal is zero from the steady-state solution.
